

Why 6point6 is your ideal partner for data enablement in underwriting

We helped the Lloyd's Market Association (LMA) to reimagine the future of delegated authority, and delivered Europe's largest cloud migration for the UK Home Office. What could we help you achieve?

We understand the data challenges in underwriting

Underwriting decisions are more crucial than ever, with commercial success dependent on faster and more accurate assessment and pricing of risk, as well as managing exposures across your portfolio.

But CUOs and heads of underwriting are faced with a raft of growing challenges from macro-factors from climate change to pandemic-driven disruption.

Then there's the pressure to be digital-ready as markets and platforms change and require an ever-growing body of data to consider in risk evaluation.

Our trusted relationships

About 6point6

We create bespoke solutions that are designed right, built right and delivered right. That's what inspires our amazing team to work closely together and navigate complex challenges. Our aim is always to solve problems in the right way. Every client is different and has a unique set of challenges. Leading with strategy, design and architecture, we connect cloud, data, and cyber to engineer and deliver large-scale, complex transformations across public and private sectors.

This year we started an exciting new journey with our investment partner Intermediate Capital Group (ICG), allowing us to bring more capabilities that scale with businesses.

We have 10+ years of experience and expertise in:

 Strategy & Design

 Architecture

 Data Engineering

 Cybersecurity

 Cloud

 Data

 Delivery

We helped the LMA develop a new digital vision of delegated authority

LMA turned to us at 6point6 for DA Re-imagined (DARE) [an exciting and ambitious project](#) mapping the future of delegated authority. We engaged closely with global insurance industry stakeholders via user-centred innovation workshops and interviews. Underwriters, coverholders, brokers and managing agents joined us to explore their ideas for a reality unconstrained by current processes and systems. We designed the research and delivered the insights, empowering the LMA to reimagine the future of the industry with the vision of their insurers centre-stage.

We're trusted by government and regulatory organisations

Delivering data and digital success for large public sector organisations is one of our key strengths. We're very comfortable navigating complexity and we understand the crucial need for risk mitigation.

UK Home Office

- We delivered the largest cloud transformation and migration in Europe, involving more than 1,400 servers with vast amounts of data, 27 data hosts and 36 external interfaces, all while maintaining continuity of services.
- The stakes were high as the Home Office is fundamental to national security and safety, leading critical operations like immigration and passports, drugs policy, crime, fire, counter-terrorism and the police.
- Our consultants, architects and engineers worked with civil servants and other suppliers to deliver a redesigned and simplified infrastructure with better stability and resilience, more reliable deployment, stronger production security, and more cost-effective scalability.

HM Courts & Tribunal Service (HMCTS)

As part of a £1 billion digital transformation project, we enabled HMCTS to launch secure new online services covering divorce, probate, civil claims and social security appeals.

"HMCTS now has a technical architecture team, supported by 6point6, to manage the technical risks and issues associated with our systems and applications and establish improved processes and procedures in support of the transition to becoming a fully digital business."

Defence Infrastructure Organisation (DIO)

- We delivered a time saving of 40% of the working week and a cost saving of £300,000 per year for the infrastructure-focused arm of the UK Ministry of Defence.
- In just 3 months, we replaced paper forms with a responsive digital service, securely accessible by 250 facilities staff, and with a user-friendly interface for data capture.
- We conducted in-depth stakeholder interviews and live observations to fully understand the processes and goals before recommending a solution.
